Basic Form

Will provide credential forms for access token or service account key as required by vertex ai, azure, aws by provider separately.

Grok - Basic “Set API key”

Saving the Key

State when api key was pasted, test passed, and user pressed Save. Auto closes popup, displays the state message as shown below and updates table.

We will implement the same behavior in our system

You will also see that when a API key is configured action button availability changes - refer to previous doc content for specific info on this.

The same state message is used regardless of whether the api key passed test or not.
